

# Presentation Instructions

---

We would like you to prepare a presentation as part of your interview. Here are guidelines/parameters to follow:

- Presentation should be 15 minutes in length. Expect about 10 minutes of questions.
- Assume you are speaking to an educated audience that may not have the specific expertise you have gained in your education or prior career.
- You can choose any topic as long as it is relevant to data science or analytics. Some candidates prefer to use their thesis or “capstone” projects; others prefer to discuss interesting projects or work they have done.
- Please DO NOT include any confidential or otherwise sensitive material without appropriate permission.
- If needed, we will provide a projector with both HDMI and VGA connection from which you can connect your own laptop or presentation device. A PC laptop with PowerPoint, a PDF reader, and a USB port will also be available for your use.
- You may use presentations based on group work, but you must be able to clearly identify the work you were responsible for and must be able to discuss the entire project.

Among other characteristics, we will use the presentation to assess your knowledge and ability to communicate to others. We recommend choosing a topic that you enjoy discussing and that showcases your abilities, especially those that may not have been addressed in the technical case study or during other parts of the interview.
